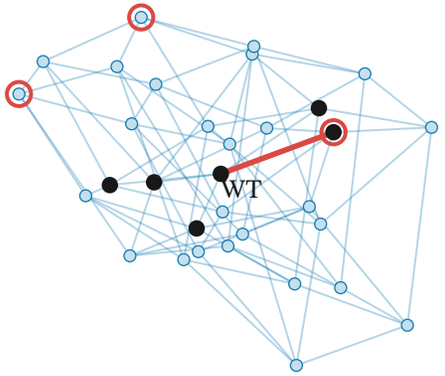
How Mutascape changes a landscape

A toy example with fixed single-mutant anchors

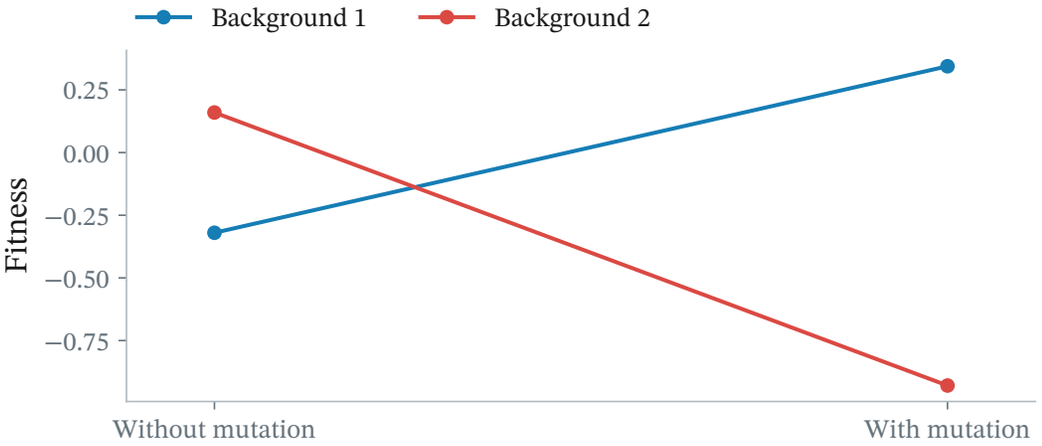
(a) A sampled landscape



Black points fix WT and single mutants.

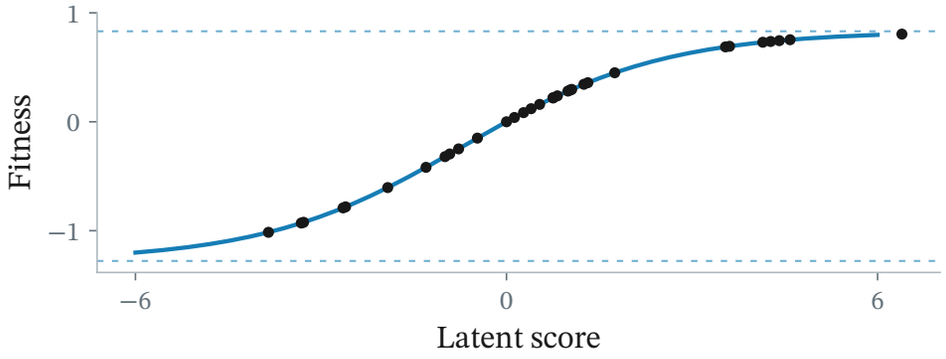
Edges show allowed steps. Red rings mark local peaks.

(b) The same mutation can help or harm

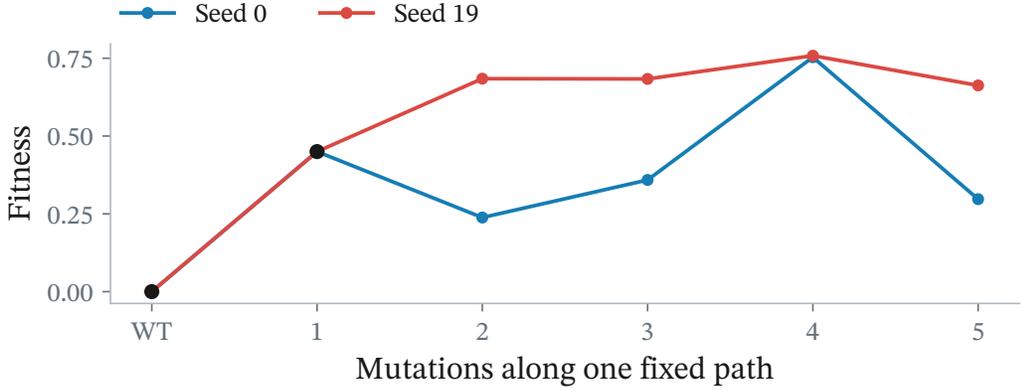


A2V changes sign between two backgrounds.

(c) Saturation preserves the order



(d) Samples agree at the anchors



Toy library, five binary sites. $\lambda = 0.8$ makes the effects visible. The manuscript uses $\lambda = 0.1$.
